

Rahsaan Pringle

Senior .NET / React Software Engineer | Full-Stack Developer

📍 Roanoke, Virginia, United States

☎ +1 (540) 358-0527 ✉ Raalnan8@GMail.com

GitHub Repo: <https://github.com/RaalnanUno/>

Citizenship: U.S. Citizen

Work Auth: United States

Clearance: Secret (active)

Engagement: W2 or 1099

SUMMARY

Senior .NET / React Software Engineer with 10+ years building scalable, cloud-hosted web applications in C#/.NET Core, ASP.NET Core, and JavaScript/TypeScript. Strong experience with React 18, Redux Toolkit, REST APIs (OpenAPI), Azure DevOps CI/CD, Azure App Service, and SQL Server. Hands-on background in DoD, healthcare, and secure environments; comfortable leading full-stack feature delivery from requirements through production support.

FEATURED PROJECTS

Media Social

Media Manager

MediaSocial is a lightweight and powerful media manager that lets you download videos and audio from your favorite websites like YouTube and watch them without an internet connection. Perfect for road trips, garage work, camping, or building your own offline media library.

This desktop application, built with modern web technologies and Electron, offers powerful media management and download capabilities.

My Ollama Voice

AI & Voice Interface

React + Vite + TypeScript app that runs local LLM conversations via the ollama API with speech-to-text, text-to-speech, persistent IndexedDB chat history, and automatic model fallbacks for reliability. Concurrent dev scripts (vite + ollama serve) and clean TypeScript tooling (ESLint 9 / TS 5.9).

Lead Full-Stack Engineer / Cloud Architecture

Alpha Omega Integrations

Oct 2025 - Present

Remote

- **Coordinated cross-system integration** across Microsoft Graph, SharePoint, Active Directory, SMTP, and MuleSoft APIs, aligning external contracts and permissions with application architecture
- **Defined and enforced architectural boundaries** separating legacy and modern code paths to prevent unintended coupling and reduce regression risk during phased migration
- **Designed fail-safe operational models** with status-driven processing and resilient logging to support high-reliability enterprise workflows
- **Addressed security and compliance challenges** related to secret management, logging detail, and environment drift through structured configuration and environment-specific controls
- **Managed complex legacy environments** including ASP.NET Web Forms, ASMX services, and mixed frontend stacks (ASPX, JavaScript, jQuery/Angular-era patterns), while guiding transition toward modern React + TypeScript architecture

Languages & Frameworks:

C#, .NET Framework 4.8, ASP.NET Web Forms (VB), JavaScript, TypeScript, React, ASP.NET Core:

Front-End Engineering:

ASPX-based UI, jQuery/Angular-era patterns, Bootstrap, React SPA architecture (Vite), incremental frontend modernization:

UI / Styling Systems:

CSS3, SCSS, Bootstrap, responsive layouts, legacy-to-modern UI transition strategies:

Back-End & APIs:

C# console applications, ASP.NET Core APIs, ASMX services, SQL Server stored procedures, Microsoft Graph API (SharePoint / OneDrive), RESTful services, secure API integration:

Data & Analytics Platforms:

SQL Server, operational telemetry, execution logging, SharePoint-based logging systems:

Version Control & Collaboration:

GitHub, branching strategies, work item alignment, architecture reviews:

DevSecOps / CI/CD:

Environment-specific configuration, secure secret handling (MSAL, environment variables, CyberArk), deployment scripting (PowerShell):

Testing & Quality:

Validation through parity testing, staged cutover verification, production diagnostics and troubleshooting:

Performance & Optimization:

Telemetry-driven performance tuning, batch processing optimization, scalable service-layer design:

UX / UI Collaboration:

Modernization of legacy UI patterns, incremental UX improvement within constrained environments:

Data Visualization:

Operational dashboards and logging visibility tools:

Cloud & Infrastructure:

Microsoft Graph, SharePoint Online, Active Directory / Windows Authentication:

Document Automation & Processing:

Document ingestion pipelines, BLOB retrieval, PDF conversion workflows, metadata enrichment, status-driven processing:

Full Stack Developer

Oneida Technical Solutions (OTS)

Jan 2024 - Oct 2025

Oneida, NY (USAF Kessel Run - Patriot Excalibur / PEX)

- **Enforced cloud-native design** principles while refactoring legacy .NET components into scalable and maintainable Azure PaaS solutions
- **Promoted engineering culture** rooted in XP practices, test automation, and rapid feedback cycles supporting continuous modernization objectives
- **Designed typed, secure .NET and Azure APIs** with OpenAPI-driven contract-first delivery and telemetry-backed monitoring
- **Advanced observability and reliability** by enhancing Application Insights dashboards and proactive alerting for flight-ready operations
- **Led UI/X architecture** using React + MUI with component reuse patterns that improved velocity and accessibility across PEX capabilities

Languages & Frameworks: C#, Angular 14+, .NET Core, TypeScript, React 18+, Redux Toolkit, dayjs, JSX/TSX

DevSecOps: Azure DevOps (Repos, Pipelines), SonarQube, Key Vault, CI/CD, Git, Vite build tooling, ESLint 9, TypeScript 5.9+

UI/UX: MUI Data Grid Pro, KendoReact, Bootstrap 5, Responsive UI, Component-based UI Architecture

UI / Styling Systems: CSS3, SCSS, MUI / Kendo theme customization, Accessibility Enhancements (DoD compliance), Responsive Design

Testing & Quality: Jest, Vitest, React Testing Library, @testing-library/user-event, jsdom, ESLint, Prettier, Husky

Cloud & Integration: Azure App Service, Azure SQL, Azure API Management, Application Insights, Secure REST APIs, Axios

Practices: Agile, Extreme Programming (XP), Test-Driven Development, Cloud-Native Modernization, Performance Profiling, Observability (Telemetry Instrumentation)

Software Developer (Contract)

Jul 2020 - Jan 2024

IQVIA

Durham, NC

- **Collaborated with clinicians & security leads** to enforce zero-trust access and regulatory compliance
- **Engineered automated data ingestion** for DHA registries (TBI, Opioid) to reduce manual reporting and

improve response efficiency

- **Enhanced system reliability** by tuning SQL Server query execution, EF Core patterns, caching, and error resilience
- **Implemented continuous delivery** pipelines via Azure DevOps with quality gates, environment controls, and secure deployment practices
- **Integrated HIPAA-secure Azure-backed services** including REST APIs, JWT hardening, and Application Insights monitoring

Languages & Frameworks: C#, .NET Core, ASP.NET Core, React 18, TypeScript, KendoReact

Data & Integration: SQL Server, Entity Framework Core, REST APIs, OpenAPI, JWT

DevOps & Cloud: Azure App Service, Azure SQL, Azure DevOps, Key Vault, Application Insights

UI / Styling Systems: CSS3, SCSS, KendoReact theming, Clinical UI Accessibility Standards, Responsive Web App Layouts

Platforms: SharePoint, CarePoint Portal (DHA), MHS Data Registry Integrations

Practices: Agile Scrum, Secure Coding Standards, Cloud-Native Development, Clinical Data Analytics

Full-Stack .NET Developer (Contract) Nov 2021 - Dec 2022
MedWand Solutions, Inc. United States (Remote)

- Contributed to EHR/workflow integration features to align with interoperability rules and clinic workflows; supported shareable patient data flows for treat-in-place decisions.
- Improved deployment reliability with CI/CD in Azure DevOps and environment-specific configuration (secrets management, build pipelines, release gates).
- Built and maintained web services for the MedWand VirtualCare® telehealth platform that supports comprehensive remote exams with 10+ clinical-grade vitals (audio, images, and sensor data).
- Collaborated with clinicians, product, and QA to triage issues, reproduce edge cases from field pilots, and ship fixes with measurable reductions in support tickets.
- Optimized data ingestion from MedWand multi-sensor devices and approved third-party Bluetooth™

peripherals (e.g., BP cuffs, scales, glucometers) via platform APIs.

Languages & Frameworks: C#, .NET 6, ASP.NET Core, TypeScript, React (support/bugfix work), HTML/CSS

APIs & Integration: REST/JSON, WebSockets (where applicable), EHR/workflow integration (interoperability-aligned), File/Blob handling

Data & Telemetry: SQL Server, Entity Framework Core, structured logging, Application Insights

DevOps & Security: Azure DevOps (Repos/Pipelines), CI/CD, Key Vault, role-based access, secure config

Domain: Telehealth platform, clinic-grade vitals capture, FDA 510(k)-cleared device ecosystem

SharePoint Developer / Senior Biostatistician SAIC

Dec 2018 - Dec 2020

Huntsville, AL

- Developed enterprise ASP.NET Core apps and REST APIs on .NET Core with EF Core and SQL Server.
- Set up Azure DevOps CI/CD (build validation, unit tests, gated releases) and automated deployments to Azure App Service.
- Hardened APIs with OIDC/claims, input validation, centralized exception handling; documented with OpenAPI/Swagger.
- Partnered with product managers and UX to deliver accessible, responsive UI.
- Improved performance with profiling and query tuning; added Application Insights logging and alerting.

Project Manager → Software Developer Sep 2013 – Oct 2018 U.S. Army Rapid Equipping Force (REF) Fort Belvoir, VA

- Provided technical mentorship to junior developers and coordinated directly with product owners and PMs to ensure alignment with operational and mission requirements.
- Standardized tooling, documentation, backlog workflows, and reporting, improving predictability and

communication across PMs, engineers, and government stakeholders.

- Coordinated directly with Army program leadership, PMs, and operators to translate urgent needs into deployable MVPs
- Delivered custom SharePoint/ASP.NET workflow automation, dashboards, and content pipelines to cut manual effort and increase throughput
- Maintained project stability across multiple recompetes, retained for mission-critical continuity through Booz Allen, KT Consulting, TSM, and Xator Corp

Platforms: SharePoint 2010/2013 (on-prem), custom web parts, InfoPath, CSOM

Languages & Frameworks: C# / .NET, ASP.NET (MVC/Web API), JavaScript, jQuery, Kendo UI, HTML/CSS

Data & Integration: SQL Server, REST/JSON services, content import pipelines

Process & Tooling: TFS/Azure DevOps, source control, build automation, issue tracking

Practices: Rapid prototyping, stakeholder co-design, performance tuning, secure coding in DoD environments

Software Developer (SharePoint)

Oct 2012 - Nov 2013

Spin Systems

United States

- Built SharePoint-integrated web apps: Kendo, REST APIs, .NET, JavaScript, jQuery, InfoPath, CSOM, HTML/CSS.
- Automated processes and improved knowledge-sharing; responsive customer support.

Software Developer

Mar 2010 - Apr 2012

Deloitte

United States

- Developed SharePoint-hosted web apps and services for large-scale content workflows.
- Implemented file-system-to-SharePoint import service for high-volume processing.

Software Developer

Dec 2007 - Mar 2010

Serco, Inc.

United States (Remote)

- Worked in SharePoint 2010 and C#/.NET.
- Developed the Production Reporting System (PRS) to drive continuous improvement.

CONCLUSION

My background in .NET, React, and modern development practices makes me an ideal fit for teams seeking someone who can bridge front-end creativity with robust backend logic.
